

BIOTEXFUTURE and the EU Textile Strategy 2030 – “How we support the change“

The textile industry is facing great challenges: according to the European Union, by 2030, a fundamental change in the textile industry is to be completed: “**Fast Fashion will be out of Fashion**” is the clear message to the industry!

For the textile sector, this means a fundamental shift away from the previous linear into circular production and consumption patterns, as well as a ban of hazardous chemicals in textile manufacturing, finishing or dyeing processes.

The BIOTEXFUTURE innovation space is able to offer potential bio-based approaches for the textile industry to address these challenges.

Please join us in the “Heart of Europe” and discuss the first BIOTEXFUTURE research results!
